

# Wireless Bridge WB-100

[www.aivaka.com](http://www.aivaka.com)

## Retrofit to wireless

WB-100 creates a wireless connection between a 24V controller and a 24V valve. Everything in the system stays the same, except the wires between the valve and controller is removed.

WB-100 is targeted for applications where wiring between a valve and controller is either not economical or impossible to do, or to replace a cut or damaged wire.

- Free ISM radio band
- No WiFi, No Bluetooth, No Cell Phone
- Over 2600 feet of range
- No more wires between controller and valve, No more digging
- Replacement for a cut or damaged wire
- Wire up an islands, across a drive way, or across a parking lot without digging
- No need to program anything, just plug & play
- No more changing batteries, Ever
- Operate multiple valves from single controller zone

## Controller To Valve Connection
