

Wireless Bridge WB-200

www.aivaka.com

Run a DC valve from a 24V controller

Now any 24V-AC controller can operate both DC and AC valves.

WB-200 is designed to connect a DC valve to any standard 24V controller. It creates a wireless connection between the controller and the DC valve. No more wires or changing batteries.

- Over 2600 feet of range
- Operate independent DC valves (hockey pucks) by the main 24V controller
- Free ISM radio band
- No WiFi, No Bluetooth, No Cell Phone
- No more digging
- Replacement for a cut or damaged wire
- Wire up an islands, across a drive way, or across a parking lot without digging
- No need to program anything, plug & play
- No more changing batteries, Ever
- Operate multiple valves from one controller zone

Controller To Valve Connection
